

BE THERE ANYWHERE™ VIDEO COLLABORATION

Be There Anywhere™ for
Business Conferencing
Customer Meetings
Product Demonstrations
Sales Meetings
Brainstorming Sessions
Distance Learning
Employee Training

Forget everything you may believe about the limitations of video conferencing and remote collaboration.

Be There Anywhere™ Video Collaboration is simply the next best thing to being there...only *better*. That's because this unique solution delivers all the benefits long-associated with traditional video conferencing, but does so more easily, readily and powerfully than any other solution available today.

Be There Anywhere™ Video Collaboration is a web browser-based platform that enables invited users from anywhere in the world to securely and simultaneously participate in a meeting as if they were sitting together in the same room, without the need for special software on either end! All users need is a laptop or desktop PC with Internet connection to see and hear live, real-time high-resolution video and audio from your conference room, while enjoying a greater level of participation and collaboration than ever before.

Our proprietary iCam intelligent video cameras enable remote users to view high-quality live video of your meeting room, and any user can be given complete pan, tilt and zoom remote control of the iCam to view different attendees in the room, charts, documents, products – *anything* needing to be seen by your meeting's remote participants. The iCam's high-resolution is powerful enough to let users zoom in and read a business card on the conference room table!

Users can also easily present, share and collaborate on -- in real-time -- virtually any type of digital file, including MSWord documents, Excel spreadsheets, PowerPoint presentations and many more.

Unsurpassed video collaboration tools for dramatically improved productivity

- Extremely intuitive and easy to use browser-based interface with point and click controls (no user manual required)
- Delivers live, real-time high resolution video directly to invited users' PC browser window – no end-user software required
- Any remote participants can easily be granted control (pan/tilt/zoom) of iCams to focus on what's important to them in the meeting room
- Automatic presets quickly focus camera on charts, white boards, moderators, group shots – *anything* in meeting room specified by users
- One click snapshot feature enables any user to quickly capture video images from the browser interface, to save and/or past into digital documents
- Any users can present, view and collaborate in real time on digital documents such as MSWord files, Excel spreadsheets, PowerPoint presentations and web pages

Straightforward Administration

- Smart, intuitive, browser-based administration tools (no user manual required)
- Easily schedule meetings and define invitees (individually and/or by groups) – system automatically sends email notifications and unique user/session passwords to invitees
- Meeting moderator sees real-time list of participants, and can assign iCam control to any user, from meeting admin browser window

Available Options for Enhanced Productivity

- Multiple iCams installed in meeting room or in multiple locations
- Companion Voice over Internet Protocol (VoIP) capabilities
